

Final Instruments

EC Technical Support Instrument Grant Agreement number 101046124

Call: TSI-2021-SMARTCITIES-IBA

Topic: Citizens participation and green solutions in smart cities

Type of action: TSI-PJG

Deliverable 1.12: Final Instruments

Delivery Year: 2023

This project has received funding from the European Union's Technical Support Instrument (TSI) programme under grant agreement 101046124.

DOCUMENT INFORMATION

1 Executive Summary

This report presents the final versions of the CitiMeasure instruments: the Guidelines on Behaviour & Policy Change, the Guidelines on Competencies for Digital Inclusion, both available online, and CitiAIR, an online inventory of air quality monitoring initiatives. It provides insights into how the instruments have been refined and an updated list of contributors to the co-creation process.

2 Introduction

2.1 ABOUT CITIMEASURE

Citizen measurement, or citizen science, initiatives contribute to a sustainable transition in European cities. By using an array of tools and instruments, citizens can play a role in the measurement and monitoring of indicators on air quality, temperature, soil moisture, biodiversity, or risk management, among many other environmental areas. Citizen measurement initiatives also can foster communications and interactions among stakeholders and contribute to the democratisation of science and policy. The CitiMeasure project (2021-2023) aims to bring together the experiences and expertise of European cities, organisations and networks in implementing citizen science initiatives (in the form of guidelines, toolbox, web-platform, Apps, etc.). The project builds upon the lessons learned from the Dutch City Deal WGs, a network of stakeholders working on the broader area of smart cities, including citizen measurement initiatives. The City Deals are an instrument of the Dutch Ministry of Interior Affairs and Kingdom Relations. One of these is the City Deal 'A smart city'. CitiMeasure builds upon these experiences and has used those to develop and pilot three 'instruments', namely:

- 1. An instrument that allows the outputs of different city measurement initiatives to be compared.
- 2. An instrument that safeguards the digital inclusivity of city measurement initiatives (maximising the opportunities for participation of interested individuals and communities).
- 3. An instrument that connects information to behaviour and policy change.

A 4th WG, Strategy and Oversight, focuses on providing strategic direction and ensuring cohesion of activities across the three Instrument Sub-Groups and the project in general. CitiMeasure is also raising awareness of the importance of citizen measurement initiatives and capitalising on the results and tools of similar citizen science projects by creating an online European Knowledge Centre with a repository of good practices.

2.2 PURPOSE OF THIS REPORT

This report includes the outputs of the work of the CitiMeasure working groups with more than 40 experts, researchers, and local representatives over one and a half years. It showcases the key elements of the final versions of the three CitiMeasure instruments, as well as insights into the refinement of the instruments. D 1.6 Prototype instruments provides more information about the methodology used, and D1.11 Final implementation plan describes the overall instrument development and piloting process.

2.3 STRUCTURE OF THIS REPORT

The final version of the guidelines produced by the Behaviour & Policy and Digital Inclusion working groups are presented in sections 3 and 4. These sections include screenshots of the final products with descriptions and the link to the web publications. Section 5 describes the interactive tool developed by the Comparability working group, named CitiAIR. The report concludes with section 6.

3 CitiMeasure Guidelines on Behaviour & Policy Change

3.1 FINAL OUTPUT

The **CitiMeasure Guidelines on Behaviour & Policy Change** [link here] aim to advance the understanding of policy and behavioural change aspects of citizen science. The final publication comes in the form of an interactive online document, presenting the final results in a visually engaging way.

The guidelines target those initiating citizen science projects and/or those who aim to study or improve current practices in existing citizen science initiatives. They include challenges and applications of citizen science and recommendations – 65 in total under ten overarching categories – for cities and citizen science initiatives on how to foster policy and behaviour change using citizen science.

The recommendations presented in the guidelines are built on a wealth of theoretical and empirical insights from 59 resources and 35 representatives from 19 European cities, and seven organisations, including academia and (non-)governmental organisations. As such, these guidelines reflect the collective understanding and experiences of a community with interest and expertise in the topic.

The Guidelines on Behaviour & Policy Change are one of three main CitiMeasure outputs presented in the <u>Knowledge Centre</u>. They are displayed in tandem with <u>CitiAIR</u> (see section 5.1) and the Guidelines on Competencies for Digital Inclusion (see section 4.1).

Figure 1: The Behaviour & Policy Guidelines in the Knowledge Centre

Via "Access the Guidelines," the user reaches the tool for Guidelines on Behaviour & Policy Change (see Figure 1).

Figure 2: Interface of the CitiMeasure Behaviour & Policy Guidelines

The landing page of the guidelines (Figure 2) presents the title of the publication, a short subtitle, an image of citizens working on a project, and the logos of the European Union, CitiMeasure and Eurocities.

There is a navigation bar at the top of the page through which the user can easily jump between different sections. Arrows on the right allow the user to turn pages or get to the end of the publication. On the top right, the user can look for keywords, share the publication on social media or via email, download it as a PDF file, or activate the full screen mode (see Figure 3).

Figure 3: Title page of a chapter

Every time a new page is opened, there is some form of micro-animation involved. A balance was struck between basic movement and functional interactivity, without taking away attention from the content. The objective here was to avoid the publication being mistaken for a PDF file.

Figure 4: Recommendations developed by the CitiMeasure working group on Behaviour & Policy

Throughout the publication, icons are used to help guide the user (see Figure 4). The 65 recommendations are accompanied by concrete examples, the access to which is only a few clicks away (see Figure 5).

Figure 5: Examples of recommendations in practice

The project's colours – green, red, and grey – are applied strategically to provide clarity and distinguish between different sections of the publication (see Figures 6, 7, and 8).

Although several citizen science initiatives aim to or claim to have, changed actor behaviour, measuring such changes is not

16

ere is a power imbalance, so there is a need to share power d be aware of political biases. Most policymaking is still top wn, and evidence-based often excludes citizen science.^{2,30} re conflicting interests or goals of policymakers, its and researchers from citizen science projects.²

References are provided throughout the publication. A small grey information icon leads to a pop-up window displaying the relevant references (see Figure 9).

Figure 9: References

The amount of time users want to invest in studying the publication is entirely up to them. Its format makes it easy to obtain a quick grasp of the content, and simultaneously allows users to linger and investigate the publication in full depth. While the title of the guidelines suggests that the target group is arguably specific, anyone with an interest in citizen science will benefit from the guidelines.

3.2 BACKGROUND

3.2.1 About the CitiMeasure Behaviour & Policy working group

The Behaviour & Policy working group is one of the three CitiMeasure working groups which developed an instrument to foster sustainable, inclusive, and smart cities. The group was initially formed through a call for expressions of interest, and it remained open throughout the instrument development and pilot phases. The working group reached a total of 36 members from different cities, governmental, research and other organisations (see Figure 10). The Vision and Objectives, as well as the co-creation process, are set out in D1.6 Prototype instruments. This deliverable focuses on the refinement process that took place between the submission of the draft instruments (D1.6) in May 2022, and the final version presented here.

Figure 10: Cities and (non-)governmental organizations that are member of the CitiMeasure Behaviour & Policy working group (updated)

Besides the Inception Meeting, seven co-creation sessions were organised during the instrument development phase (see D1.6 Prototype instruments for more details). In the pilot phase, three additional co-creation sessions were organised to share updates about the pilots and extract insights to refine the prototypes. A final co-creation meeting was organised at the beginning of 2023. Figure 11 presents a summary of the main discussions in each of these meetings.

First pilot co-creation session (June)	
Feedback to pilot plans	
Second pilot co-creation session (September)	
 Feedback to pilot implementation Visualisation of the guidelines 	
Third pilot co-creation session (November)	
 Refinement of the guidelines Training material 	
Final meeting (Jan/Feb 2023)	
Feedback to mockup version of the guidelinesFeedback to overall process	

Figure 11: Key outputs of the CitiMeasure co-creation sessions in the pilot phase

3.2.2 Refinement of the Behaviour & Policy guidelines

In the co-creation sessions during the pilot phase, members were updated about the implementation of the pilots, and reflected about different ways to visualise the prototypes. The prototype of the Guidelines on Behaviour & Policy change (included in D1.6) was refined in consultation with the working group members. To facilitate these discussions, the programme Miro was used (see Figure 12).

Link to the publication

Below you will find the different elements of our guidelines (in yellow), and also additional elements that might be included (in green). Please use the ee to indicate which are the KEY elements that should be included in the web publication.

Challenges and applications	18 categories of recommendations	82 specific reco	ommendations	11 examples of projects	2 target audiences: · Cross · Cross
Background information about the process of developing the guidelines	List of contributors	Background info CitiMeasure		Testimonies from WG members	Stories from pilots
		•••	*****		
		00000 00000 0000	*****	••••	
			00000		

What techniques, i.e. colour coding, icons, etc. would you use to visualise the key elements in the web publication?

Figure 12: Miro exercise to discuss the refinement of the B&P guidelines.

In parallel, the CitiMeasure team worked with an external company to design the web publications based on the existing prototype. The company provided a non-interactive draft of the Guidelines on Behaviour & Policy Change which was presented at the final Behaviour & Policy working group meeting for feedback (see Figure 13).

Figure 13: Miro exercise to provide feedback to the mock-up

A small task force of volunteers from the working group was created to finalise the refinement of the guidelines. A template was provided to send feedback about the usability and user-friendliness of the web publications (see Table 1).

The final instrument is expected to be published in April 2023, and will be launched in an online webinar on 4 May 2023.

4 CitiMeasure Guidelines on Competencies for Digital Inclusion

4.1 FINAL OUTPUT

The **CitiMeasure Guidelines on Competencies for Digital Inclusion** [link here] aim to advance the understanding of the issue of "competencies" for inclusion in increasingly digitalised citizen science initiatives. Their visualisation aligns with the Guidelines on Behaviour & Policy Change: it uses the same logic and design. It, too, comes in the form of an interactive online document.

The guidelines are primarily developed to guide those who are interested in identifying, understanding, and enhancing capacities and competencies required for digital inclusion of different actors in citizen science projects. This includes cities, organisations, researchers, and practitioners who are involved in initiating citizen science projects, and/or those who aim to study or improve current actor inclusion practices in existing citizen science initiatives.

The guidelines result from a co-creation process led by Eurocities in close collaboration with the CitiMeasure Digital Inclusion working group members. The final product therefore reflects the collective understanding and experiences of 24 CitiMeasure working group members from seven European cities and nine organisations with interest and expertise in the topic, and is built on a wealth of theoretical and empirical insights from 39 resources.

The Guidelines on Competencies for Digital Inclusion are one of three main CitiMeasure outputs presented in the <u>Knowledge Centre</u>. They are displayed in tandem with <u>CitiAIR</u> (see section 5.1) and the Guidelines on Behaviour & Policy Change (see section 3.1).

Figure 14: The Digital Inclusion Guidelines in the Knowledge Centre

Again, a click on "Access the Guidelines" in the Knowledge Centre will redirect the user towards the visualised guidelines (see Figure 14).

Figure 15: Interface of the CitiMeasure Digital Inclusion Guidelines

As can be seen from Figure 15, the interface of the Digital Inclusion Guidelines is in correspondence with the Behaviour & Policy interface. The ribbon on top of the publication uses the same categories, with chapter 3 being an exception ("Competencies Framework" in Digital Inclusion rather than "Challenges" in Behaviour & Policy).

Figure 16: The Competencies Framework (Chapter 3)

Chapter 3 presents the competencies framework developed by the working group members. They defined competencies as a construct of skills, knowledge, and attitudes. Throughout the framework three different icons clarify who the competencies presented are relevant for (see Figure 16).

Figure 17: Mind map of skills

The large "skills" circle invites the user to click on it. Once clicked upon, a mind map opens with different skills categories (here: transferable skills, scientific research skills, data management skills, data science skills, digital (software) skills, technical (hardware) skills, and co-creation skills).

The same logic applies to the "knowledge" and "attitudes" sections (see Figures 18 and 19).

Figure 19: Attitudes section

The three sections are then explored in more detail. Figure 20, for instance, shows how the respective elements in "knowledge" are explained using "think of" examples. A small icon next to titles or the body text invites users to open a list of references (see Figure 9). Below the titles, icons indicate to which actors (citizen scientists, project initiators/facilitators, and information professionals) the elements are most relevant (see Figure 20).

Figure 20: Example of different elements in "knowledge"

Much like the Guidelines on Behaviour & Policy Change, the Guidelines on Competencies for Digital Inclusion are relevant for anyone interested in citizen science. The user-friendly presentation of the content encourages users to explore the pages, be it just for a few minutes or in greater detail.

4.2 BACKGROUND

4.2.1 About the CitiMeasure Digital Inclusion working group

The Digital Inclusion working group is one of the three CitiMeasure working groups developing an instrument to foster sustainable, inclusive, and smart cities. The group was initially formed through a call for expressions, and it remained open throughout the instrument development and pilot phases. The working group reached a total of 27 members from 7 cities, and 11 governmental, research and other organisations (see Figure 21).

The Vision and Objectives, as well as the co-creation process, are set out in D1.6 Prototype instruments. This section focuses on the refinement process that took place between the submission of the draft instruments (D1.6) in May 2022, and the final version presented here.

Figure 21: Cities and (non-)governmental organizations that are member of the CitiMeasure Digital Inclusion working group (updated)

Besides the Inception Meeting, seven co-creation sessions were organised during the instrument development phase (see D1.6 Prototype instruments for more details). In the pilot phase, three additional co-creation sessions were organised to share updates about the pilots and extract insights to refine the prototypes. A final co-creation meeting was organised at the beginning of 2023. Figure 22 includes a summary of the main discussions in the different Digital Inclusion working group meetings.

First pilot co-creation session (June)

Figure 22: Key outputs of all the CitiMeasure Digital Inclusion co-creation sessions in the pilot phase

4.2.2 Refinement of the Digital Inclusion guidelines

The prototype of the Guidelines on Competencies for Digital Inclusion was refined in consultation with the working group members. In the co-creation sessions during the pilot phase, members were

updated about the implementation of the pilots, and reflected about different ways to visualise the prototypes. To facilitate these discussions, the programme Miro was used (see Figure 23):

Figure 23: Miro exercise in the third co-creation meeting during the pilot phase

In parallel, the CitiMeasure team worked with an external company to design the web publications based on the existing prototype. The team simplified the text provided in D1.6 Prototype of the instruments, especially regarding background and methodological information. The company provided a non-interactive draft of the Guidelines on Competencies for Digital Inclusion which were presented at the final Digital Inclusion working group meeting for feedback (see Figure 24). A small task force of volunteers from the working group was created to finalise the refinement of the guidelines. A template was provided to send feedback about the usability and user-friendliness of the web publication (see Table 1). The final instrument is expected to be published in April 2023, and will be launched in an online webinar on 4 May 2023.

Figure 24: Miro exercise to provide feedback to the first Digital Inclusion mockup version of the guidelines

5 CitiAIR: An inventory of participatory air quality monitoring initiatives

5.1 FINAL OUTPUT

The **CitiAIR interface** consists of five different elements:

- 1. Main landing page
- 2. Section explaining the mission of the tool
- 3. Section inviting organisations to submit their air quality initiatives
- 4. Section informing about the number of initiatives, organisations, and sensors used
- 5. Interactive map displaying all submitted CitiAIR initiatives

a) Main (landing) page

The landing page of the online tool (see Figure 25) displays the name of the instrument – CitiAIR – and provides a short description of its raison d'être.

Figure 25: Landing page of the tool

CitiAIR can easily be accessed from the <u>CitiMeasure Knowledge Centre</u>. Users are invited to access the inventory, submit the story of their initiative, or explore additional training material (see Figure 26).

Figure 26: CitiMeasure Knowledge Centre

b) Mission of the tool

The CitiMeasure comparability tool pursues three main goals:

- Identify and co-create an inventory of air quality monitoring activities of different (European) cities and organisations
- Facilitate knowledge sharing between city officials and citizen science initiatives regarding air quality measurements
- Pilot and consolidate the CitiMeasure tool to facilitate the comparability of air quality data

Figure 27: Summary of the CitiMeasure Comparability working group mission

c) Share your story

In the "share your story" section, organisations are invited to submit their initiatives. The banner includes a button saying "I want to share my story." Once users click on the button, they are redirected to a new page asking them to fill in the details of their initiative. The questionnaire seeks information about key characteristics of the project, technical details, data use, and contact details.

Figure 28: Share your story

Step 1: Your organisation

Country	

The main objective here is to gather information about the organisation in charge of the initiative. The user is asked to provide the information presented in Figure 29. The dropdown list below the question, "What best describes the type of organisation you are representing?", includes the following options:

- City administration
- Government organisations
- National or International Non-Governmental Organisations
- Community-Based Organisation/Civil Society Organisation
- Private company
- Academia
- School
- Other

The question, "How would you describe your organisation's mission?", is important to understand the nature and main objective of an organisation. The information gathered is used in the interactive map to filter initiatives and organisations.

Step 2: Your initiative

Figure 30: Step 2 – Your initiative

The objective of this step is to gather general information about the initiative, including the main target audience and the context in which the initiative operates (see Figure 30). In the budget

CitiMeasure_D1.12_ Final instruments (2023) 24 of 31

question, users have the option to choose from "zero to €10,000" through to "more than €1,000,000." Under the duration of the programme, users can choose from "less than a month" to "more than a year." In the participants question, users can choose from "0 to 25 participants" to "over 5000."

Figure 32: Step 3.1 – Add equipment

The level of expertise ranges from "simple if you take time to read the documentation" to "have to be an expert – requires special training." Users need to add new equipment by clicking the button at the bottom (see Figure 31). In this additional form, users will be able to include the name and brand, as well as the origin of the equipment and the measurement parameters (see Figure 32). The new equipment will thus be added as a row in a table.

Step 4: Data platform

Figure 33: Step 4 – Data platform

The main objective of this step is to collect information about the management of air quality data: its usage, visualisation, and quality control (see Figure 33).

Step 5: Review

In this last step, users are asked to review the information they provided once again (see Figure 34). Should they spot a mistake or incomplete information, they can easily intervene. Once everything is in order, the user can opt for "final submission" for their initiative to become part of CitiAIR.

d) CitiAIR in numbers

44	39423	43
INITIATIVES	DEVICES	ORGANIZATIONS

Figure 35: CitiAIR in numbers

"CitiAIR in numbers" serves as an introduction to the interactive map. It provides users with an idea of the magnitude and reach of CitiAIR (see Figure 35).

e) The tool: An interactive map

DISCOVER INSPIRING INITIATIVES

Note: the map and initiative information display the location of the organisations in charge of the initiative

Figure 36: Interactive map

The tool comes in the form of an interactive map. Different initiatives are represented using a location identifier. Users can then click on each initiative or filter initiatives by choosing categories from the drop-down menu where they can sort initiatives by organisation type, status (ongoing; inactive/ended), and country (to date: Netherlands [9], Spain [7], Belgium [6], UK [4], France [3], Italy [3], Greece [2], Ireland [2], Portugal [2], Austria [1], Czech Republic [1], Finland [1], Germany [1], Poland [1], and Türkiye [1]) (see Figure 36).

Figure 37: Example of a CitiAIR initiative in London, UK

The "Read More" button directs users to a separate page where users can find out more about the respective initiative (see Figure 37). The information displayed here is based on the questionnaire the initiatives submitted online.

Figure 38: Example of a SAMHE, a participatory initiative for better air in schools

Users can switch between four different tabs (as a result of the information gathered in the questionnaire) (see Figure 38).

At the end of the page, other initiatives are displayed (see Figure 39).

Figure 39: Example of a SAMHE, a participatory initiative for better air in schools

If numerous initiatives exist in a region, they are clustered. This way, users can identify particularly active regions right away. Once they click on the blue circle, the map zooms in on the respective initiatives (see Figure 40).

Figure 40: Example of clusters

If users do not want to engage with the map, they can simply browse through the different initiatives in list form (see Figure 41).

5.2 BACKGROUND

5.2.1 About the CitiMeasure Comparability working group

The Comparability working group is one of the three CitiMeasure working groups developing an instrument to foster sustainable, inclusive, and smart cities. The group was initially formed through a call for expressions, and it remained open throughout the instrument development and pilot phases. Currently, the working group has 27 members from 7 cities, and 11 governmental, research and other organisations. The Vision and Objectives, as well as the co-creation process, are set out in D1.6 Prototype instruments. This section focuses on the refinement process that took place between the submission of the draft instruments (D1.6) in May 2022, and the final version presented here.

Cities	(Non-) governmental and research organizations
• Antwerp	• Acoucite
Barcelona	Air Parif
• Belfast	Air Sentinels
• Debrecen	• ICTU
• Ghent	• Civity
• Maribor • Milan	 Dutch National Institute for Public Health and the Environment (RIVM)
• Rumia	Fab Lab Barcelona
• Torino	 Flemish Institute for Technological Research (VITO)
	• Kunak
	Loco Labs
	Norwegian Institute for Air Research (NILU)
	Sensor. Community
	Sensor2School
	University College Dublin (UCD)
	University of Aveiro

Figure 42: Cities and (non-)governmental organizations that are member of the CitiMeasure Comparability working group

Besides the Inception Meeting, six co-creation sessions were organised during the instrument development phase (see D1.6 Prototype instruments for more details). In the pilot phase, two additional co-creation sessions were organised to share updates about the pilots and extract insights to refine the prototypes. A final co-creation meeting was organised at the beginning of 2023. Figure 43 presents a summary of the main discussions in each of these meetings.

First pilot co-creation session (June)	
Feedback to pilot planBranding	
Second pilot co-creation session (September)	
Final feedback to the CitiAIR tool	
Final meeting (Jan/Feb 2023)	
Feedback to overall process	

Figure 43: Key outputs of all the CitiMeasure co-creation sessions in the Comparability working group

5.2.2 Refinement of the online tool

The working group worked in an iterative way and provided feedback to the tool as the work evolved. The team used the programme Miro to discuss updated versions of CitiAIR, decide on the branding and provide overall feedback on the tool (see Figure 44).

6 Concluding remarks

The current report presents the final online versions of the three CitiMeasure instruments: the Guidelines on Competencies for Digital Inclusion, the Guidelines on Behaviour & Policy Change and the CitiAIR comparability tool. These products resulted from a one-and-a-half-year co-creation process. The instruments are built upon many resources and past experiences in the field of citizen science and reflect the collective knowledge of more than 40 experts, researchers, and city representatives. The ambition of CitiMeasure is that these instruments become a valuable source of guidance and information for both existing and future citizen science initiatives, especially those with an urban focus.

All three instruments are now available in the Knowledge Centre section of the CitiMeasure website. The Guidelines on Competencies for Digital Inclusion and Behaviour & Policy Change will be officially launched at a webinar in May 2023. More information about this webinar will be included in D2.3 Three webinars. The instruments will be added to different citizen science platforms and online repositories, including <u>Scivil</u>, the <u>City Deal toolbox</u>, and the <u>EU- Citizen.science</u> platform. More details about these efforts to ensure the sustainability of the instruments will be reported in D2.5 Knowledge Centre Business Plan.
